

## 12) VB Program using Checkbox and Option Button Control

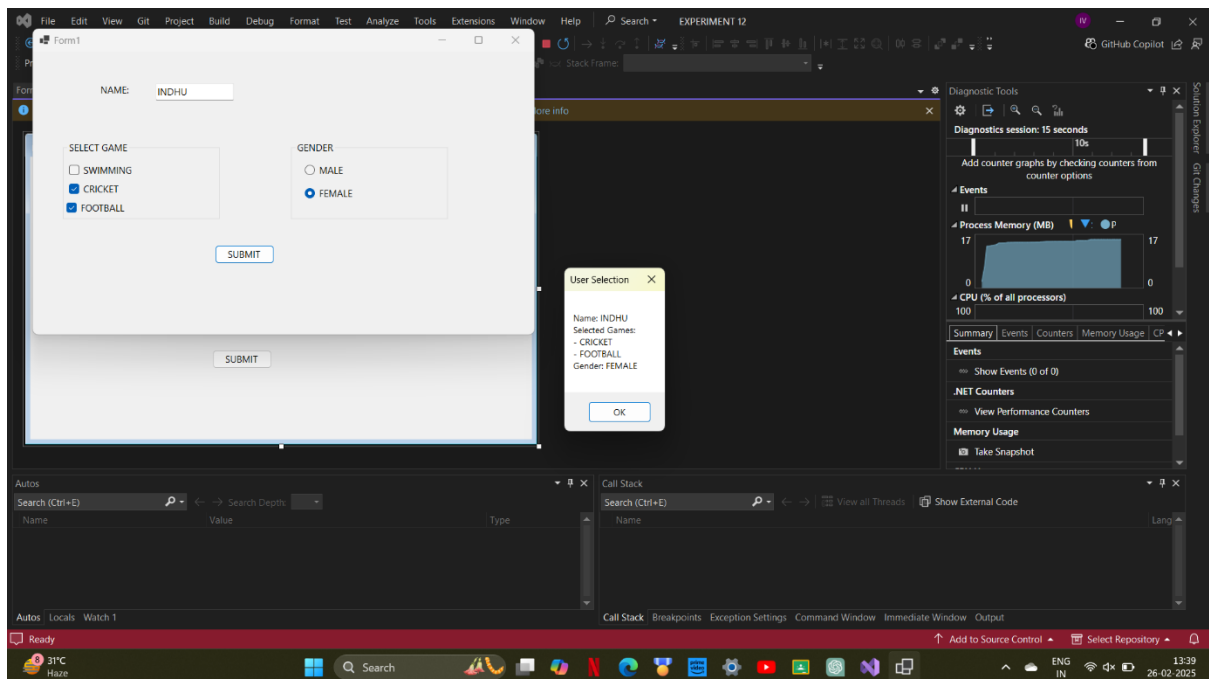

### Aim:

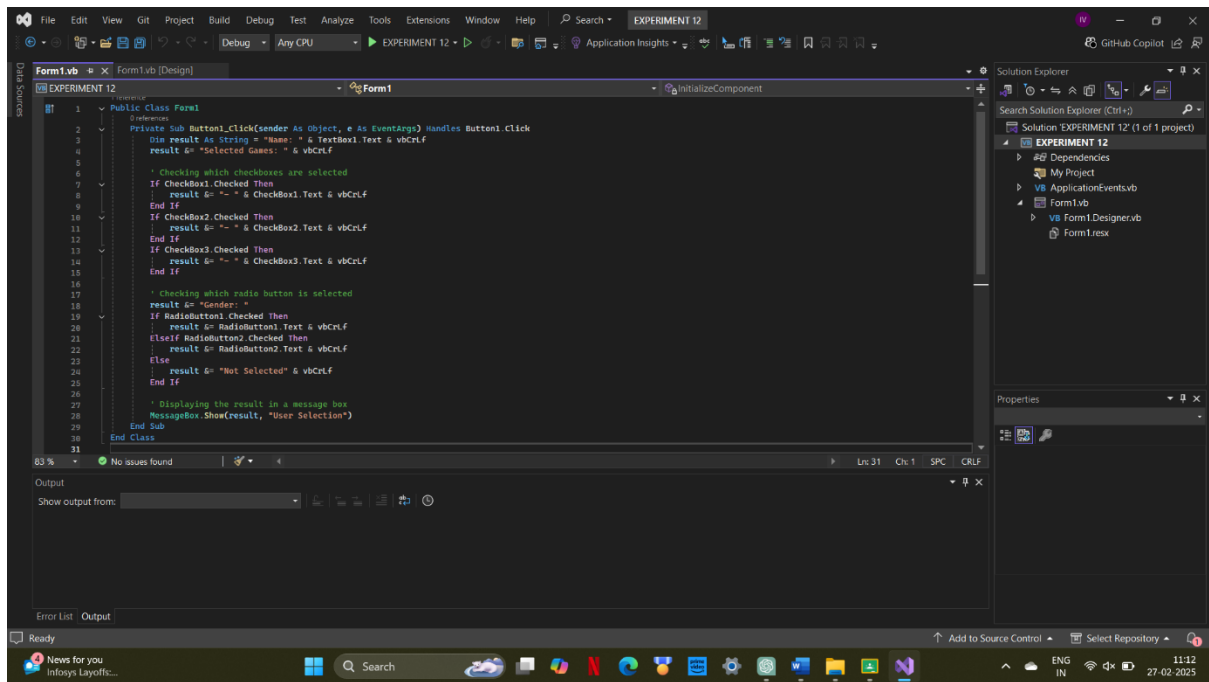

To create a Visual Basic program that allows users to select multiple choices using checkboxes and a single choice using option buttons, displaying the selected values when a button is clicked.

### Procedure:

1. Create a new VB project.
2. Add:
  - Two **Checkboxes** (Check1, Check2) with captions "C" and "Python".
  - Two **Option Buttons** (Option1, Option2) with captions "Male" and "Female".
  - A **Command Button** to display the selected options.
3. Double-click the button and enter:

### OUTPUT:

## RESULT:

A message box appears displaying selected languages and gender when the button is clicked.
