**EXPERIMENT 18**

Aim:

To implement an **Ad Rotator** control for displaying hotel advertisements dynamically.

Procedure:

1. Open **Visual Studio** and add a new **Web Form (WebForm1.aspx)**.

2. Create an XML file (**Advertisements.xml**) with multiple ad details (image, URL, alternate text).

3. Add an **AdRotator** control in **WebForm1.aspx** and link it to the XML file.

4. Run the application and verify that ads are changing dynamically.

Output:

Result:

An **Ad Rotator** control was successfully implemented to display hotel advertisements.
